Bachelor of Computer Applications | Ajeenkya DY Patil University, Pune

Year of Passing: **2020**

ACHIEVEMENTS

- ☑ **WINNER, TECHNOVATE NATIONAL HACKATHON (**May, 2019**)**
- ☑ **FINALIST, SMART ODISHA HACKATHON (**Nov, 2018**)**

PUBLICATIONS

Developer Operations for Collaborative Use of Tools & Services, International Journal of Emerging Technologies and Innovative Research(UGC and ISSN Approved)

PROJECTS

Problem Statement: Release a single-vendor Educational Android app to individual Play Store accounts of multiple customers with incrementing customers daily

Solution: Streamlined application deployment by designing an automation tool that handles releases and client management, all within a single platform (without third-party integrations)

`Django` `Firebase Functions` `Nginx` `Angular` `Redis` `Maria DB(AWS RDS)`

Problem Statement: Defined flow for deployment of mobile app to Play Store for new features and implementations

Solution: Created an Over-The-Air update workflow which allowed dynamic content serving and automatically updates hash encoding at runtime

`Ionic` `NodeJS` `Ubuntu Server(AWS EC2)` `React JS` `Android` `Nginx`

Problem Statement: Send out invites to list of individuals from an Excel file

Solution: Developed a WhatsApp scraper and executor, which autonomously extracted names from Excel, employed WhatsApp Web to send text and attachments, achieving under 2 seconds per user

`Python` `Selenium`

GENERAL PROJECTS

E-Commerce Application   `Web` `Mobile` `Desktop`

- Mobile app to display products to customers and guest users
- Admin web and desktop interface for managing features and facilitate orders
- Complex data management with realtime updates for new as well as existing products

`Django` `NodeJS` `React JS` `Ionic` `Angular` `Android` `Mongo` `MariaDB` `Firebase` `Redis`

ERP for Equipment Rental Companies   `Web`

- Admin application to manage assets and their details - fleet details, insurances, bank claims etc
- App allowed users to interact directly with banks within the application and track responses

`Django` `Angular` `Nginx` `Ubuntu Server (AWS EC2)` `Mongo`

Organisation's Integrated POS & ERP   `Web`

- Manage products, orders, customer queries to the organisation, easy resource allocation, simplified data management for application users and easy approach to analyse sales

`Django` `HTML` `Maria DB`
